--- SUBCELLIULAR LOCATION: Secreted.
--- TISSUB SPECIFICITY: ALL MALIGNANT MELANOMA CELL LINES TESTED AND INFREQUENTLY IN GLIOWA CELL LINES.
--- PTM: MAY POSSESS TWO INTRAMOLECULAR DISULFIDE BONDS.
--- SIMILARITY: BELONGS TO THE MIA / OTOR FAMILY.
--- SIMILARITY: Contains 1 SH3 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDIJINE 2721341; PubMed=9097023;

"Tyrosine phosphorylation of Vav stimulates IL-6 production in mast cells by a Rac/G-Jun N-terminal kinase-dependent pathway.";

J. Immunol. 163:802-810(1999).

-:- FUNCTION: Couples tyrosine kinase signals with the activation of the Rho/Rac GTPases, thus leading to cell differentiation and/or proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBUNIT: Interacts with SLA (By similarity).

PTM: Phosphorylated on tyrosine residues.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                              The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiintlammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF55099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                              9
        Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

The amino acid sequence is predicted from a novel assembled GRLP). The amino acid sequence is predicted from a convel assembled GRLP?

16372272. The protein has a mol.wt. of 14 kba unglycosylated.

16372272. The protein has a mol.wt. of 14 kba unglycosylated.

16372272. The protein has a mol.wt. of 14 kba unglycosylated.

16372272. The protein has a mol.wt. of 14 kba unglycosylated.

16372272. The protein has a mol.wt. of 14 kba unglycosylated.

16372272. The protein has a growth regulatory proteins.

16372272. The protein well-amily as growth regulatory proteins.

16372272. The protein well-amily a growth and 64*

16372272. The protein (CD-RAP, 44* identity and 64*

16372272. The protein world and polymucleotides of the invention can be used in the prophylatis, treatment (including gene therapy)

16372272. The prophylatis, treatment (including gene therapy)

16372272. The prophylatis, which include the GRLP mature protein, and alagnosis of disorders and diseases caused by, or involving, gloomas. The polypeptides, which include the GRLP mature protein, cartilage development and maintennes, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as gloomas. The polypeptides, which include the GRLP mature protein, can be able to the differentiation activity, tissue growth activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; angiogenesis; PRO protein; cardiovascularisation; wound; cancer; atherosclerosis; cardiac hypertrophy; gene therapy; endothelial disorder; cardiant; cytostatic; antiangiogenic; hypotensive; vulnerary; antiarteriosclerotic.
                                                                                                                                               The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory call, in function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing to retreating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

```
The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, mycoardain infarention, trombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a PRO protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19 HGIFMDRIASKKLCADDECVYTISLASAQEDYNAPDCRFINVKKGQQIYVYSKLVKENGA 78

The PRO proteins and polymucleotides have cardiant, cardiant, antianglogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polymucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, hymbuacida arthritis, angina, myceradial Infarctions, thromophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polymucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 HGIFMDRLASKKI.CADDECVYTISLASAQEDYNAPDCRFINVKKGQQIYVYSKLVKENGA 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                           The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists are useful for treating a PRO related disorder. The PRO Polypeptides are useful for treating a PRO related disorder. The PRO Polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO Polypeptides are useful for stimulating the proliferation of or gene expression, in perioyte cells, for stimulating the proliferation of differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, to stimulating the proliferation of normal human darmal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. Adu83992-AAU83713 represent human PRO protein sequences of the invention.

and to identify membrane-bound or soluble receptors. The polynucleotides may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated novel secreted polypeptide (I) and autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and psychiatric diseases, cardiovascular diseases, respiratory disorders infertility, neurological and psychiatric diseases, cardiovascular diseases. These may also be used to treat diseases, an gastrointestinal diseases. These may also be used to treat diseases, abnormal diseases. These may also be used to vaccines for induction, function and/or metabolism of the genes, as vaccines for inducing immunological response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 HGIFMDRLASKKLCADDECVYTISLASAQEDYNAPDCRFINVKKGQQIYVYSKLVKENGA 60

The present sequence is that of a novel human growth regulatory-like polypeptide (GRLP) mature protein. The sequence is predicted from a novel assembled CDNR (see AAHS643) based on Hyseq clone number 1637272. The protein has a mol.wt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory protein. Growth factors, human melanoma derived growth regulatory protein growth factors, human melanoma derived growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid-sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRLP polypeptides and polynucleotides of the invention and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as growth and tumours, including neuroectodermal tumours such as growth and tumours, including neuroectodermal tumours such as growth and tumours, including neuroectodermal tumours such as cativity, hemostaptics, remunosuppressive or immunosuppressive or immunosuppressive or immunostimulant activity, activit/inhibin activity, chemostatic/chemokinetic activity, and activity, activit/inhibin activity, activity, and activity, activity, and activity, activity, and activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activity, activit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  6 DRLASKKLCADDECVYTISLASAQEDYNAPDCRFINVKKGQQIYVYSKLVKENGAGEFWA 65

DNAS. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory call function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAR59063 to AAR59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 HGVFMDKLSSKKLCADEECVYTISLARAQEDYNAPDCRFIDVKKGQQIYVYSKLVTENGA 60

                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                            The present invention describes novel MLP proteins and their encoding bulbs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing to treating bone and joint diseases as well as pathologic angiogenesis. AAF50063 to AAF5009 and AAB69122 to AAB69122 represent sequences used in the exemplification of the present invention.

The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory calls function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF53063 to AAF53099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 HGMFMDKLSSKKLCADEECVYTISLARAQEDYNAPDCRFINVKKGQQIYVYSKLVTENGA 60

DNAS. The MLP proceins and DNAS have antihilammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAS can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

AAF59063 to AAF5099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                  65
                                                                                                                                                                                                                                  function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing to recenting bone and joint diseases as well as pathologic angiogenesis. AAFS9063 to AAFS9089 and AAB69122 to AAB69132 represent sequences used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treat cancer (melanoma, glioblastoma, neuroblastoma, small cell lung cancer, neuroectodermal tumours) or as an immunosuppressant (it inhibits IL-2 or phytohaemagalutinin induced proliferation of peripheral blood lymphocytes). Antibodies raised against the protein can be used to detect cell producing the protein and also protein nurification. Probes derived from DNA encoding the protein purification. Probes derived from DNA encoding the protein or related proteins. The protein may be expressed as a fusion protein (conjugated with dihydrofolate reductase (DHFR)).

The invention relates to the use of melanoma inhibiting activity (WIA) contein and/or its fragments that have anti-inflammatory effects and induction and/or its fragments that have anti-inflammatory effects and induction of systemic immune tolerance or specific T-cell tolerance to MIA antigen, for manufacturing a preparation against inflammatory diseases.

CC and for induction of systemic immune tolerance or specific T-cell tolerance in patients suffering from or susceptible to inflammatory diseases. A fragment of MIA is useful as a therapeutic substance and is useful for manufacture of pharmaceutical preparations against consecution disease, specifically theumatoid arthritis, autoimmune diseases, specifically theumatoid arthritis, autoimmune diseases like Graves' disease, juvenile arthritis, primary glomerulonephritis, polyarthritis, osteoarthritis, sindismune companies, which is systemic lupus erythematosis, inflammatory bowel disease, multiple sclerosis or diabetes. The MIA polypeptides have specific effect on the autoreactive T-cells thus leaving the other components of the immune system intact as compared to the non-specific suppressive effect of immunosystem intact as compared to the non-specific suppressive thuman MIA protein.
